1. Product introduction

TM075413

Fig. Left to right: SCALA1, SCALA2

Grundfos SCALA pumps are all-in-one integrated pressure boosters designed for domestic use and ensure a constant supply of clean water to households, gardens and light commercial applications.

SCALA1

Grundfos SCALA1 is a self-priming, multistage pump, which combines all the components of a pressure booster into a compact composite enclosure.

SCALA1 can communicate with Grundfos GO Remote app through a built-in Bluetooth technology, which enables high customization options, making this pump a good fit for every application.

SCALA2

Grundfos SCALA2 is a fully integrated, self-priming, compact waterworks for pressure boosting in domestic applications.

SCALA2 incorporates integrated speed control which allows maintaining a perfect pressure in the taps. This means that the pump performance will increase with the increasing demand.

Applications

These boosters are suitable for domestic and light commercial water supply, where pressure boosting is required.

We recommend SCALA pumps for the following applications:

- pressure boosting of city mains water
- pressure boosting of water from roof tank
- pressure boosting of water from break tank
- pressure boosting of water from ground tank
- water supply from shallow wells (< 8 m)
- garden irrigation
- water transfer.

Depending on the application needs and required comfort, one pump can be a better fit than the other.

Pumped liquids

The product is suitable for pumping clean, thin, non-aggressive and non-explosive liquids without solid particles or fibres.

The product is designed for fresh water with a maximum chloride content of 300 ppm and a free chlorine content below 1 ppm.

Examples of liquids:

- potable water
- rainwater.

Features and benefits

General benefits of SCALA pumps:

- Easy installation.
- Easy commission.
- Easy operation.

2. Installation and operation

Mechanical installation

Placing the pump above ground is generally a convenient way to establish water or rainwater supply. The pump can be installed both indoors and outdoors.

The product should be placed as close as possible to the liquid to be pumped to minimize the length of the inlet pipe. The motor is water-cooled, but we still recommend a clearance of 0.5 m on three sides of the product.

The product should be fastened to a solid horizontal foundation with a maximum inclination angle of $\pm 5^\circ$. The base plate must be facing downwards.

If the pump is used for pumping rainwater or well water, we recommend that you install a filter on the inlet side to protect the pump from sand, gravel or other debris. If the pump is installed above the liquid level, we recommend that you fit a foot valve with a strainer to the inlet pipe.

Pipe system

To obtain the optimum suction capacity which the dry-installed pump is designed for, the correct dimension of the pipe system is important. If a hose is used as inlet pipe, it must be non-collapsible.

The diameter of the inlet pipe must be larger than 1", if the inlet pipe is longer than 10 m, or if the suction lift exceeds 4 m.

Inlet pipe length and suction lift

The length of the inlet pipe of self-priming pumps depends on the geodetic suction lift. The recommended maximum length of the inlet pipe according to the suction lift is shown in the figure below. The example shows that if the suction lift is 2.5 m, the length of the inlet pipe must not exceed 25 m.

Fig. Maximum inlet pipe length (horizontal axis) according to the suction lift (vertical axis)

Inlet and outlet pipes

Follow these general precautions when connecting the inlet and outlet pipes.

- Install the pipes so that air pockets are avoided, especially on the inlet side of the pump.
- Use eccentric reducers with the tapered side down.
- Make sure the pipes are as straight as possible to avoid unnecessary bends and fittings. We recommend long-radius 90° pipe bends to decrease friction loss.
- If possible, run a horizontal inlet line. We recommend a gradual upward slope for pumps operating in suction-lift conditions.
- A short pipe must be of the same diameter as the inlet port or larger.
- A long pipe must be one or two sizes larger than the inlet port, depending on the length.

Fig. Recommended pipe installation to avoid friction and air pockets

Fig. Correct pipe sizing for connection to the pump inlet or outlet

Maximum system pressure

The maximum inlet pressure depends on the head at the actual duty point. The sum of the inlet pressure and the head must not exceed the maximum system pressure. We recommend installing a pressure-relief valve to protect the pump so that the outlet pressure does not exceed the maximum system pressure.

Installation examples

We recommend that you follow the installation examples. Valves are not supplied with the pump.

Suction from a well

TM075006

Pos.	Description
1	Highest tapping point
2	Isolating valve
3	Flexible hoses
4	Pipe support
5	Inlet filter
6	Foot valve with strainer
H1	Maximum suction lift: 8 m
H2	Inlet pipe must be submerged at least 0.5 m

Suction from a tank

TM075007

Pos.	Description
1	Highest tapping point
2	Pipe hangers
3	Isolating valve
4	Flexible hoses
5	Drain to sewer
6	Inlet filter
7	Freshwater tank
8	Foot valve with strainer
9	Minimum 1-degree inclination

Mains water pressure boosting

Fig. Mains water pressure boosting, SCALA2

Pos.	Description
1	Highest tapping point
2	Pipe hangers and supports
3	Isolating valves
4	Flexible hoses
5	Bypass valve
6	Optional pressure-reducing valve on the inlet side if the pressure can exceed 10 bar (145 psi).
7	Optional pressure-relief valve on the outlet side if the installation cannot withstand a pressure of 6 bar (87 psi).
8	Drip tray. Install the pump on a small stand to prevent the ventilation holes from being flooded.
9	Pressure gauge
10	Mains water pipe

Roof tank filling

Pos.	Description
1	Float switch
2	External input (switch) cable
3	Pump
4	Water source (tank)
5	Roof tank

Electrical connection

The electrical connection and protection must be carried out in accordance with local regulations. Please also observe the following requirements:

- Make sure that the pump is suitable for the power supply to which they are to be connected.
- The pump must always be correctly earthed.
- The plug on the pump must have the same protective earth (PE) connection system as the power outlet. If not, use a suitable adapter if allowed by local regulations.
- A pump without plug must be connected to an external main switch or wired with a plug.

Motor protection

The pump incorporates current- and temperature-dependent motor protection. If the pump is blocked or otherwise overloaded, the built-in thermal switch will cut out. When the motor has cooled sufficiently, it will restart automatically.

No external motor protection is required.

3. Selection guide

This guide helps you to size and select the most suitable SCALA product.

Follow the instructions below to determine which product variant is best suited to your needs.

1. Choose the right pump for your application.

Application	Pump	Suitability rating	Recommendation
City water mains	SCALA1	• •	
	SCALA2	• • •	Due to integrated frequency converter, SCALA2 can adapt the speed to varying water pressure in the city mains, delivering constant pressure in all taps any time. PN10 rating ensures robustness towards maximum system pressure.
Shallow well	SCALA1	• • •	SCALA1 construction offers better suction capabilities with different modes to handle air.
	SCALA2	• •	
Water storage tank (above ground level)	SCALA1	• •	
	SCALA2	• • •	Adjustable constant pressure for SCALA2 enables user to select the desired pressure for the entire home, and thus avoids overpressure.
Water storage tank (below ground level)	SCALA1	• • •	SCALA1 construction offers better suction capabilities with different modes to handle air.
	SCALA2	• •	
Roof tank	SCALA1	• •	
	SCALA2	• • •	Adjustable constant pressure for SCALA2 enables user to select the desired pressure for the entire home and thus avoids overpressure.
Water transfer	SCALA1	• • •	External input and fixed speed in SCALA1 will make sure water is transferred as quickly as possible from point A to B, when needed.
	SCALA2	•	
Garden irrigation	SCALA1	• • •	External input and calendar function are a perfect combination for irrigation purposes.
	SCALA2	•	
Kitchen	SCALA1	• •	
	SCALA2	• • •	SCALA2 delivers constant pressure to all taps regardless of the inlet pressure.
Bathroom	SCALA1	• •	
	SCALA2	• • •	SCALA2 delivers constant pressure to all taps regardless of the inlet pressure.

2. Size your pump.

Number of floors	1-5 taps	6-10 taps	11-20 taps	21-50 taps
4	SCALA2 3-45 or SCALA1 3-45	SCALA1 5-55	SCALA1 Twin 5-55	SCALA1 Twin 5-55
3	SCALA2 3-45 or SCALA1 3-45	SCALA2 3-45 or SCALA1 3-45	SCALA1 5-55	SCALA1 Twin 5-55
2	SCALA2 3-45 or SCALA1 3-35	SCALA2 3-45 or SCALA1 3-45	SCALA1 5-55	SCALA1 Twin 5-55
1	SCALA2 3-45 or SCALA1 3-25	SCALA2 3-45 or SCALA1 3-35	SCALA2 3-45 or SCALA1 3-45	SCALA1 Twin 5-55

Preconditions:

- A tap pressure of 3 bar is considered. To achieve pressure of 4 bars, add two floors.
- The inlet is flooded. For suction operation, add a floor for every 3 meters of suction depth.
- A tap flow between 9 and 12 l/min average usage and half of the taps opened at the same time will be considered.

4. SCALA1

TM 075390

Fig. SCALA1 pump

Grundfos SCALA1 is a self-priming, multistage pump, which combines all of the components of a pressure booster into a compact composite enclosure. SCALA1 can communicate with the Grundfos GO Remote app through a built-in Bluetooth technology, which enables high customization options, making this pump a good fit for every application.

Product range

Pump type	Nominal flow rate m ³ /h	Max. head [m]
SCALA1 3-25	3	25
SCALA1 3-35	3	35
SCALA1 3-45	3	45
SCALA1 5-25	5	25
SCALA1 5-55	5	55

Motor

The motor is water-cooled and equipped with sealed, greased-for-life ball bearings to ensure silent operation and minimum service. The motor has a built-in thermal switch and requires no additional motor protection.

Features and benefits of SCALA1

- Water on demand.
- All-in-one integrated booster.
- Bluetooth communication.
- External input.
- Twin booster enabled.
- Low noise level < 55 dB(A).

Self-priming

A self-priming pump ensures a stable operation, even if the pump is not fully filled with liquid. The self-priming pump is able to lift liquid from below the inlet level and handle a mix of air and liquid until the pump reaches a fully-primed pumping condition.

Robust design

The pump is designed for long and trouble-free operation. Composite construction combined with excellent corrosion-resistant internal components ensure high robustness in operation.

Easy installation

SCALA pumps can be installed in three easy steps:

- Connecting the pipes.
- Priming the pump.
- Plugging the pump into a power outlet.

The pump will start running after it has been plugged into a power outlet.

Protection features

Dry-running protection

The product incorporates dry-running protection that automatically stops the pump in case of dry running. Dry-running protection means less risk of pump damage and lower maintenance costs.

Anti-cycling function

The anti-cycling function prevents the product from starting and stopping too often in case of a minor leakage in the system or if a tap has not been closed completely. The anti-cycling function will stop the pump, and an alarm will be indicated.

Maximum runtime

The maximum runtime function is a timer that can turn the pump off if it runs continuously for a certain amount of time. This time period is adjustable via Grundfos GO Remote app.

5. SCALA1 twin booster system

TM075391

Fig. SCALA1 twin booster system

SCALA1 can be easily setup as a twin booster, in case there is a need for a stand-by pump or higher flow demand.

For this purpose, there is a dedicated accessory set that includes:

- base plate
- inlet and outlet manifolds with valves
- communication cable
- fixing screws.

In the twin setup, the two SCALA1 pumps communicate together via a cable included in the accessory kit, enabling optimum double-pump operation.

Features and benefits

The twin system has all the features and benefits of the SCALA1 pump.

Easy installation

SCALA1 twin booster can be quickly installed. After the pumps are mounted on the base plate and connected with a cable and manifolds, it is only a matter of connecting to the pipe system.

Once the system is primed, it is ready to deliver water.

Alternation

Once the communication cable is connected and the system powered on, the pumps are automatically assigned a priority at the start.

Alternation determines when the pumps will switch priority in starting, enabling equal use during operation lifetime.

Grundfos GO Remote allows selecting the following options:

- alternate on runtime
- alternate on the number of starts.

Alternate on runtime

Pump 1 will be the first to start until it accumulates the defined number of running hours. After that, Pump 2 will start first.

Alternate on number of starts

Pump 1 will be the first to start until it accumulates the defined number of starts. After that, Pump 2 will start first.

Grundfos GO Remote enabled

SCALA1 twin booster system can be connected to Grundfos GO Remote via Bluetooth communication to be able to adjust the system parameters to specific user needs.

Protection features

SCALA1 twin booster has all the protective functions of the SCALA1 pump.

Dry-run protection will stop each pump separately, while the anti-cycling protection and maximum runtime protection will stop the system.

Operation modes

Duty/Assist

In Duty/Assist, both pumps can run at the same time, delivering more flow on the outlet side.

If one pump is unable to meet the demand, the second pump will start up.

Duty/Standby

In this mode, only one pump will run at a time, while the other pump will remain as a standby pump.

Based on alternation settings, the pumps will switch priority in starting.

6. SCALA2

TM075409

Fig. SCALA2 pump

Grundfos SCALA2 is a fully integrated, self-priming, compact waterworks for pressure boosting in domestic applications.

SCALA2 incorporates integrated speed control, enabling the ability to keep perfect pressure in the taps, which means that the pump performance will increase with increasing demand.

Motor

The highly efficient motor with a permanent magnet is water-cooled and equipped with sealed, greased-for-life ball bearings to ensure silent operation and minimum service.

It has a built-in thermal switch and requires no additional motor protection.

Features and benefits of SCALA2

- Perfect water pressure.
- All-in-one integrated booster.
- High energy efficiency.
- Easy selection.
- Compact.
- Low noise < 47 dB(A) with typical use.

Perfect water pressure

SCALA2 is equipped with an integrated sensor that measures the pressure discharged from the pump. The sensor sends a signal to the pump control and compares the measured pressure level with the desired pressure level, which is the pressure set according to the homeowner's needs.

If there is a difference between these two measurements, the pump control signals the frequency converter to increase or decrease the pump speed, thus maintaining a constant pressure in the system.

Self-priming

A self-priming pump ensures a stable operation, even if the pump is not fully filled with liquid. The self-priming pump is able to lift liquid from below the inlet level and handle a mix of air and liquid until the pump reaches a fully-primed pumping condition.

Robust design

The pump is designed for long and trouble-free operation. Aluminium construction combined with excellent corrosion-resistant internal components ensure high robustness in operation.

Easy installation

SCALA pumps can be installed in three easy steps:

- Connecting the pipes.
- Priming the pump.
- Plugging the pump into a power outlet.

The pump will start running after it has been plugged into a power outlet.

Protection features

Dry-running protection

The product incorporates dry-running protection that automatically stops the pump in case of dry running. Dry-running protection means less risk of pump damage and lower maintenance costs.

Anti-cycling function

The anti-cycling function prevents the product from starting and stopping too often in case of a minor leakage in the system or if a tap has not been closed completely. The anti-cycling function will stop the pump, and an alarm will be indicated.

Maximum runtime

The maximum runtime function is a timer that can turn the pump off if it runs continuously for a certain amount of time. For SCALA2, this time period is 30 minutes.

8. Accessories

SCALA twin accessory set

Fig. Twin accessory set

When an installation requires a two-pump solution, SCALA pumps can be easily connected using this set. It includes all the necessary components to set up SCALA pumps as a twin booster system.

This set includes:

- base plate
- two manifolds (inlet and outlet) including the isolation valves
- communication cable (for SCALA1 only)
- fixing screws.

Construction of SCALA twin accessory set

Fig. Exploded view of SCALA twin accessory set

Pos.	Component	Material
1	Isolation valves	Brass
2	Manifold cap with O-ring	Composite, NBR
3	Inlet and outlet manifolds	Composite
4	Communication cable	-
5	Twin base plate	Composite
6	Fixing screws	Stainless steel

Inlet filter

Fig. Inlet filter accessory

When using SCALA products for pumping rainwater or well water, we recommend installing a filter on the inlet side to protect the pump from sand, gravel or other debris.

Features of the filter include:

- Clean water provides long life for the pump.
- Quick and easy installation.
- Easy maintenance and cleaning.

The square mesh allows a uniform flow along the entire surface of the cartridge itself, which minimizes the possibility of clogging. Also, the smooth surface of the filter ensures easy washing and cleaning. The filter cartridges provide a nominal filtration with an efficiency of 80 %. If properly used, they can be used repeatedly maintaining constant efficiency.

The inside core is manufactured from talc-filled polypropylene and a welded nylon net. The filter housing is composite.

Filter specifications

Micron rating	250
Efficiency percentage	80
Max. working pressure [bar (psi)]	8 (116)
Max. differential pressure [bar (psi)]	0.8 (11.6)
Max. working temperature	45 °C (113 °F)

9. Grundfos Product Center

Online search and sizing tool to help you make the right choice.

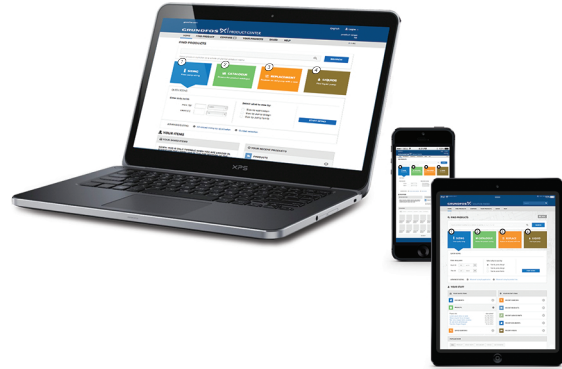

<http://product-selection.grundfos.com>

All the information you need in one place

Performance curves, technical specifications, pictures, dimensional drawings, motor curves, wiring diagrams, spare parts, service kits, 3D drawings, documents, system parts. The Product Center displays any recent and saved items - including complete projects - right on the main page.

Downloads

On the product pages, you can download installation and operating instructions, data booklets, service instructions, etc. in PDF format.
